

# ANMC *Helicobacter pylori* Treatment Guideline

## Background Information<sup>1</sup>

- 75% of the AN/AI population is colonized with *H. pylori* (range: 61-84%, by region)
- Screening or testing for *H. pylori* for routine evaluation of dyspepsia or other GI symptoms is not clinically useful or supported by clinical evidence for high prevalence populations
- For routine clinical practice, there is **insufficient evidence-based data** to support community-wide treatment eradication as a mechanism for gastric cancer prevention
- **Current literature DO NOT support a test and treat method**

## Local Antimicrobial Resistance Patterns<sup>5</sup>

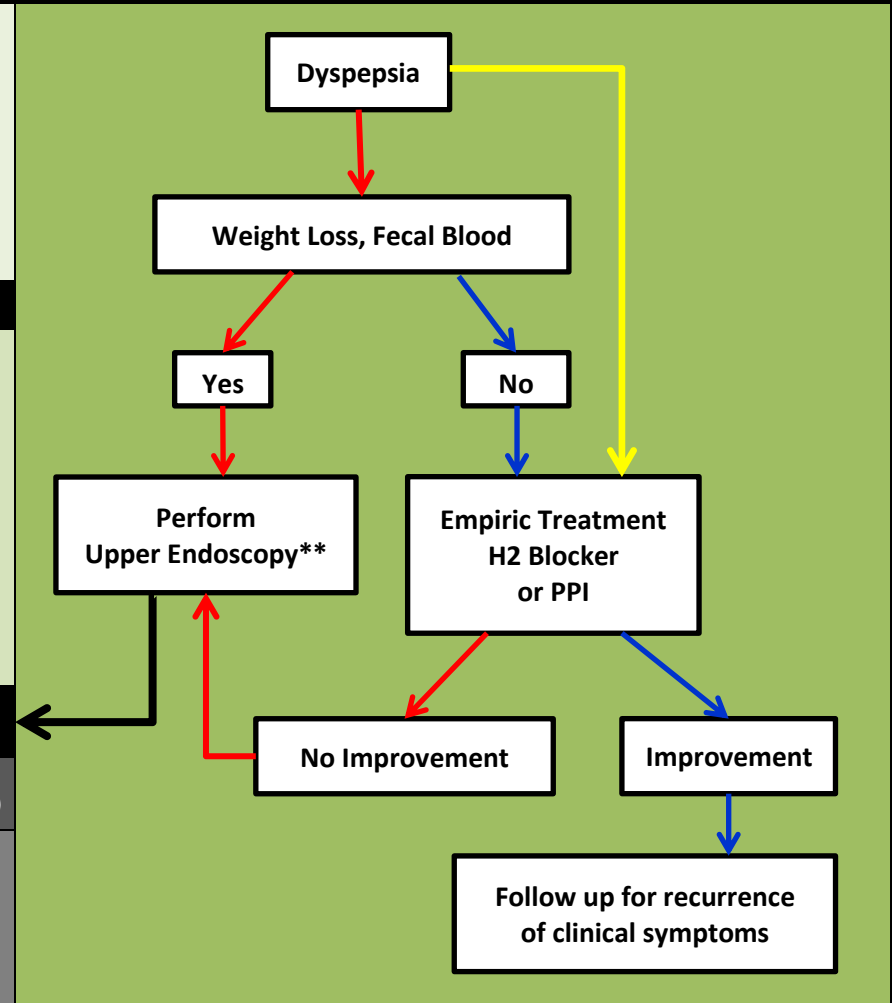

**Quadruple therapy is recommended over triple therapy in the AN/AI population due to resistance**

- **30-36% resistance** rate to **clarithromycin** with no significant differences between age groups or urban vs. rural setting
- **42- 65% resistance** to **metronidazole** with no difference between urban or rural settings but higher in females and patients aged 30-40 years of age (ie, prior metronidazole exposure)
- **0-5% resistance** to **amoxicillin**
- **19- 26% resistance** to **levofloxacin** with higher rates in urban vs rural setting
- No resistance to **tetracycline**
- No local surveillance data for **rifabutin**

***H. pylori* is identified by histology and/or CLOtest from EGD, when should treatment occur?<sup>1</sup>**

| Yes  | No*<br><i>(Many causes of dyspepsia exist where antibiotics would not help)</i>  |
|--|--|
| <ul style="list-style-type: none"> <li>❖ Endoscopy reveals the following:                             <ul style="list-style-type: none"> <li>❖ Duodenal ulcers</li> <li>❖ Gastric ulcer</li> <li>❖ MALT lymphoma</li> <li>❖ Intestinal metaplasia</li> </ul> </li> </ul> | <ul style="list-style-type: none"> <li>❖ Gastroesophageal reflux disease (GERD)</li> <li>❖ Irritable bowel syndrome (IBS)</li> <li>❖ Mild/moderate gastritis w/wo anemia</li> <li>❖ Excessive/chronic NSAID use</li> <li>❖ Heavy alcohol use</li> <li>❖ Gastritis regardless of <i>H. pylori</i> status</li> <li>❖ Poor gastric motility (<i>bezoars or conditions predisposing to GI motility disorders such as scleroderma or diabetes</i>)</li> </ul> |

## Testing Strategy<sup>1</sup>

**\*\*Further evaluation and treatment are dependent on findings of pathology found on endoscopy**
